MongoDB

EMPLOYMENT HISTORY

Lead Engineer at Leapfrog Technology Inc

January 2023 - February 2026

- **Led and delivered 4 projects from ideation to production** within estimated timeline collaborating with **multiple cross-functional, geographically distributed teams** with hands-on contribution to code-base
- **Drove adoption of cleaner maintainable coding patterns** like service repository patterns and new internal coding standards, **reducing code review time to 2 days**
- **Spearheaded the breakdown of business requirements into well defined technical tasks** with clear acceptance criteria, thus bringing the **lead time for changes within the range of 4 to 7 days**.
- **Implemented mandatory Test Driven Development approach** for all critical services, achieving **90% test coverage** and drastically reducing **QA bottlenecks**

Senior Software Engineer at Leapfrog Technology Inc

December 2020 - January 2023

- **Led and delivered multiple feature teams** from ideation stage to production with hands-on contribution to coding

-
- **Achieved stakeholder satisfaction** through deeper understanding of business requirements and breaking them down into well defined tasks
 - **Architected a queue based** notification delivery system
 - **Set-up the foundational code-base** for both back-end and front-end repositories for 2 projects
 - **Architected the database schema** for 2 projects

Full Stack Software Engineer at Leapfrog Technology Inc

December 2017 - December 2020

- **Independently delivered complete features**, by building UI/UX components, secure API layers, service functions and integrating them
- **Customized** High Charts Library to build complex Fence Diagrams- a core requirement of product

EDUCATION

Bachelors in Computer Engineering at Kathmandu Engineering College

September 2013 - September 2017

PROJECTS

Name: Phil

Role: Senior Full Stack Engineer

Phil is a US based health-care platform focused on providing a modern solution to help patients to get their medications quickly and affordably, help pharma brands overcome access barriers, improve patient outcomes, and drive gross-to-net.

Key Contributions:

- **Architected a highly configurable Next.js application**, using **Orchestrator, Component Registry pattern**, enabling **rapid, per-client dynamic theming**.
- **Rapidly built and delivered Gross To Net calculator** to feature in Phil's marketing site
- **Developed a flexible agentic AI system** utilizing an abstraction layer to support **multi-LLM workflows and specialized tool-calling**.

Name: Inpart Assess Module

Role: Senior Full Stack Engineer | Team Lead

Assess is a module within Inpart's existing system, with the goal of building assessments and related surveys which the managers can assign for users within Inpart's partner companies or experts to participate in and providing dashboard visualizations to showcase the results from the survey.

Key Contributions:

-
- **Established a standalone module** within the existing **microservices architecture**, enabling its **independent deployment, tech stack and database**.
 - **Independently designed and built a seamless survey participation system** for users without login required, with **secure, stateful authentication mechanism**.
 - **Saved the DevOps team** an estimated **1 week** by **implementing runtime configuration file strategy** for the Vite-built application.

Name: Golend

Role: Senior Full Stack Engineer | Team Lead

Golend is a peer to peer marketplace based in NewZealand, which matches those looking to invest with those looking to borrow.

Key Contributions:

- **Ensured fast to market delivery of the product** by establishing the **codebase foundation, database schema and leading rapid development**.
- **Ensured the critical financial calculations** are **accurate** and **reliable** by **implementing service-repository pattern** for **cleaner, testable and maintainable service layer functions**.
- **Increased the marketing site performance by 30%** for faster loading times and **better user experience**, through refactored codebase.
- **Devised the disaster recovery plan** at the database layer with **Recover Point Objective of 5 minutes**.
- **Planned and executed mandatory demo meetings** with the product's admin team before each production release, by **preparing a test environment** for hands-on experience with new features, **reducing production bugs by 70%** and increasing familiarity with the product.

Name: Soliish

Role: Senior Full Stack Engineer | Team Lead

Soliish is a platform helping patients to self-detect Sleep Apnea based on facial features of users and their answers to survey questions.

Key Contributions:

- **Saved database infrastructure cost** by **architecting a multi-tenant database system** with a **shared-database, separate-schema approach**.
- **Enabled admin users to control authorization of data resources** by **designing and building** a convenient and **secure Role-based access control system**.
